### SUMMARY

A highly motivated and enthusiastic final-year undergraduate student in Software Engineering. dedicated to excelling in the field. I bring a proven ability to deliver tasks on time, collaborate effectively in team environments, and manage priorities for high-quality outcomes. With strong analytical and troubleshooting skills, I am a fast learner who adapts quickly to new technologies and methodologies.

#### **EDUCATION**

**B.Sc.** (Hons) in Computing & Information Systems Sabaragamuwa University of Sri Lanka 2021- Present

Department of Computing and Information Systems, Faculty of Computing

### **G.C.E Advanced Level**

D.S.Senanayake National College, Ampara Physical Science stream

### PROFESSIONAL EXPERIENCE

### Intern Software Engineer | Remote

Aug 2024 - Jan 2025 | Sri-Lanka

Marc Brothers

• As an Intern Software Engineer at MARC Brothers, I contributed to the development of a Flutter-based e-commerce web application, working on both frontend and backend components.

### Key responsibilities

- Developed the frontend of the e-commerce web application using **Flutter**, ensuring responsive design and smooth user interactions.
- Implemented **Riverpod** for efficient **state management** across the application.
- Created a secure login system with JWT authentication, enhancing user security.
- · Contributed to backend development using Spring Boot, integrating APIs and managing data flow between the client and server.
- Collaborated on building a fully functional e-commerce website, ensuring seamless integration between frontend and backend systems.

### Associate Software Engineer | Remote

Dec 2024 - Aug 2025 | Australia

Talent Bees Technologies

 I work as an Associate Software Engineer at Talent Bees Technologies, where I was part of the mobile app development team responsible for building the Oordy Ride Share App using Flutter.

### Key responsibilities

- Developed cross-platform mobile application using **Flutter**, following **Clean Architecture** principles.
- Implemented state management using both Riverpod and GetX for scalable and maintainable code.
- Integrated RESTful APIs with Flutter frontend, ensuring seamless backend communication.
- Implemented car navigation and real-time location tracking using the Google Maps API.
- Built in-app chat pages for user messaging and integrated a ChatBot using ChatGPT API to provide real-time travel suggestions.
- Engineered effective prompts to interact with ChatGPT for dynamic user experiences.
- Used GitHub CI/CD pipelines for automated testing, deployment, and smooth collaboration across branches.
- Worked with Postman for API testing and validation.

#### **PROJECTS**

# Parkinson's App 🕥

Flutter | Dart | Python | Firebase | Group

Developed as a group project, I worked on the frontend and API integration, using Firebase for user authentication and signup. Implemented live voice recording with audio playback and integrated it with a Python ML model to detect Parkinson's indicators. Users can view their results, listen to recordings, and export them as PDFs. The app features two interfaces: one for users and another for doctors to review patient recordings and download reports. Supports Sinhala and English languages using the intl package, allowing seamless language switching.

# Nobel App

Flutter | Dart | MySQL| Firebase | Spring boot | Java | Individual

A feature-rich mobile application built using Flutter, Dart, Firebase, MySQL, and Spring Boot . It offers dynamic profile themes and badges that auto-update based on user rewards. Includes real-time user rankings, persistent global time tracking, and responsive UI updates powered by **Provider** for state management. Backend APIs built with Spring Boot connect to MySQL, with **Postman** used for seamless data validation and syncing.

## **Appexlove- DatingApp**

Dart | Flutter | Firebase | Group | Ongoing deployment on Android & iOS | Client: Uganda

The app enables users to create profiles, upload images, and match based on shared interests, with an integrated chat system for interaction. It includes Google Maps integration for location-based discovery, advanced filters for personalized search, and a Stripe-powered premium subscription for extended profile views and exclusive features. An Ambassador section was designed to facilitate matches, support users, and manage partner connections, while a report/block system ensures user safety.

# User Account page backend 🔘

C# | ASP .NET | JWT Token | Individual

This is an ASP.NET Core-based backend application that provides user authentication and profile management features. It supports essential account operations such as sign-up, login, and updating user details. The application uses JWT (JSON Web Token) for secure authentication, ensuring that only authorized users can access protected resources. The backend is designed for easy deployment in standard server environments and is suitable for scalable and secure application architectures.

### **TECHNICAL SKILLS**

Front-End Frameworks and Languages: Flutter , Dart , Android Studio(Java) , React Js

Databases: FireBase , MongoDB , Mysql , SQL Server

**Back-End Frameworks and Languages**: Java, Dart, Spring boot, JavaScript, C#, .Net **Other Technologies and Languages**: HTML, CSS, Python, C, Postman, Docker, CI/CD

#### **SOFT SKILLS**

Fast Learning, Self-Learning Ability, Teamwork, Problem-Solving, Time Management, Willingness to Accept Challenges

### **INTERESTS**

Currently learning: Django, AWS, Photoshop

Tech: Swift, Figma, Node.js, Adobe XD, Adobe Creative Suite, Photoshop

Other: Music, Rugby

### **AWARDS**

Serphants ID app: Taking the 1st place podium at Ruhuna's Innovation Exhibition 2023!

### **EXTRA CURRICULAR ACTIVITIES**

**Society of Computer Science | SUSL** Active Member
